**Pitless Units**

**Description**

None

Customized units for state approved wells. Units attach to well casing and contain an underground connection to discharge pipe. The unit seals by using o-rings on an internal spool that drops into place through the riser pipe of the unit. The o-rings are not exposed to ground water, thus eliminating the possibility of contamination. Available in well casing sizes from 6" to 30". Unit attaches to well casing by threading, welding or compression coupling. Discharge can be threaded or flanged.
